(57) Abstract:

PROBLEM TO BE SOLVED: To switch a function by voice input by recognizing voice at the time of inputting voice so as to control the function of a beam gun.

SOLUTION: The beam gun 1 is provided with a battery power source part 2 and a voltage/voltage conversion part 3 to supply a prescribed DC voltage for a microcomputer 4, which mounts a voice recognition circuit in itself. The voice recognizing circuit recognizes voice inputted from a microphone 22 for prescribed time from the time when a voice recognizing switch 14 provided for the gun 1 is pressed. Namely, a player presses the switch 14 and then inputs voice from the microphone 22 to switch the mode of an infrared beam emitted by the gun 1 to improve the thrilling feeling of a game.
